PROFILE SUMMARY

Results-driven Frontend Engineer specializing in building scalable, highly-performant web applications using React, Next.js, and TypeScript. Expert in state management, data-fetching architecture, and aggressive client-side performance optimization. Proven track record of architecting complex interactive solutions and robust enterprise-grade applications, focused on delivering clean code, intuitive UI/UX, and stable frontend architectures that support critical business requirements.

EDUCATION

Zagazig University

BSc Computer and Information Systems (GPA: 3.4/4.0).

Zagazig, Egypt

2023 – Expected 2027

Information Technology Institute (ITI)

Web Development Using React JS (Summer Program)

Completed Aug. 2025

EXPERIENCE

Freelance Projects

Independent Contractor

Remote

Feb. 2025 – May 2026

- Architected and delivered custom, high-impact web applications for multiple clients, ensuring optimal code quality, performance metrics, and scalable structure.
- **Flagship Project: Centralized Academic Resource and Event Management System** ([Live](#) | [GitHub](#))
Feb. 2025 – May 2026
- Handled the frontend product development within a cross-functional team, transforming complex workflows into a centralized ecosystem using **TypeScript, Redux Toolkit, RTK Query, and Tailwind CSS**.
- Implemented complex bilingual forms (AR/EN) using React Hook Form and Zod, ensuring strict type-safe runtime schema validations on heavily nested models.
- Applied comprehensive production-level performance optimization techniques (route-based lazy loading, asset compression, and absolute caching), reducing initial JavaScript bundle size by 40% and drastically reducing redundant API payloads.

PROJECTS

Nezuko HR – Full-Stack Job Portal System | [Live](#) | [GitHub](#) | *React.js, React Query, Zustand, Framer Motion* Dec. 2025

- Led the entire frontend engineering within a cross-functional team, spearheading the architecture of a high-performance candidate-facing web client integrated with complex backend endpoints.
- Optimized application rendering performance by implementing route-based code splitting (**React.lazy**) and isolating heavy third-party vendor libraries into distinct code chunks, decreasing the initial loading payload by 45%.
- Executed asset performance strategy by forcing image lazy loading and asset conversion to Next-gen WebP format, dropping overall page load time by 50%.
- Integrated Framer Motion for smooth UI transitions, lowering user-perceived latency and providing a seamless interactive experience.
- Achieved exceptional production browser audits, hitting a verified **93% Performance** score and **95% SEO** rating on Lighthouse.

Business Incubator Platform | [Live](#) | [GitHub](#) | *Electron.js, React, Tailwind*

Jan. 2026 – Feb. 2026

- Developed a cross-platform desktop management application driven by an architectural passion to explore native runtime integrations using Electron.js to establish dedicated local environments for incubator administrators.
- Designed a unified dashboard workspace to track active startup progression stages, manage system resource allocation, and organize administrative communication workflows.

Ketabak – E-Commerce Bookstore | [Live](#) | [GitHub](#) | *Vanilla JS (ES6+), HTML5, CSS3*

Dec. 2025

- Built a responsive e-commerce storefront completely built with pure Vanilla JavaScript to master low-level DOM manipulation, browser rendering lifecycles, and memory management.
- Secured maximum performance and perfect SEO metrics natively by removing standard framework runtime overhead, producing near-instantaneous search speeds, multi-criteria client-side filters, and pagination.

CV Creator Web Application | [Live](#) | [GitHub](#) | *React.js*

Oct. 2025

- Developed an interactive web utility focused on generating professional, modern, and highly machine-readable ATS-friendly resumes.
- Implemented a robust dynamic data-binding architecture that automatically syncs schema structures across multiple layout templates, outputting scalable PDF exports with active embedded links.

Rochetta – Full-Stack E-Commerce Pharmacy | [Live](#) | [GitHub](#) | *React.js, RTK Query, Tailwind CSS* Jul. 2025 – Aug. 2025

- Led the complete frontend development within a product team, architecting a highly responsive web client featuring a dynamic product catalog and an optimized global shopping cart system.
- Leveraged RTK Query to construct efficient server-state data fetching and automated background cache synchronization, reducing redundant network data traffic by 35%.
- Improved overall rendering speed and initial content presentation by enforcing component-level code splitting, asset lazy loading, and memoization hooks (`useMemo`, `useCallback`), achieving a 30% reduction in Time to Interactive (TTI).

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Tailwind CSS, Framer Motion

Forms & Validation: React Hook Form, Zod

State Management & Fetching: Redux Toolkit, RTK Query, React Query, Zustand, Context API

Tools & Desktop: Electron.js, Git, GitHub, Jira, Agile/Scrum

Familiar With: Node.js, Express.js, PostgreSQL, MongoDB

Languages: Arabic (Native), English (Professional Working Proficiency / B1+)

CERTIFICATIONS

Web Development Using React JS (145 hrs) | *Information Technology Institute (ITI)*

Aug. 2025

Algorithm Analysis | *Udemy*

June 2025
